

# TPM Seminar of JIPM Next stage Manufacturing & TPM

**19th March 2020** Place: Kyoto International Conference Center  
**10:00-16:00** Fee: 100 000 JPY/person

**Registration in web-page**

<https://sform.jp/tpm2019/registration.html>

## Program 1. TPM ; Toward the Next Stage

Industry 4.0 and Digital Transformation have been proposed as new concepts. IoT is making equipment diagnosis smarter. JIPM has been discussing the effects and issues of using IoT to visualize losses, focusing on equipment management. As TPM activities are expanding around the world, Mr. Fukuda, chief of the Award for TPM Excellence Assessment Committee, explains about the roles and importance of the TPM in the future, based on a wealth of examples.

**Mr. Yoshiro Fukuda /  
TPM Award Chief Assessor**

## Program 2. Production of highly reliable equipment by TPM / failure analysis network

In recent years, due to environmental changes such as the expansion of overseas production, it has become difficult to respond by the conventional TPM activities of the manufacturing department. Therefore, the equipment production department and the TPM department were integrated to form a new department. I introduce the creation of highly reliable equipment that has been promoted by the equipment user side and manufacturing side together.

**Mr. Takuro Inatsuki /  
DENSO Corporation**

## Program 3. TPM with Digital Transformation ver.3 -the way to establish Dynamic Capability in Uncertainties-

We see the world are facing increasing uncertainties. Effort for Industry 4.0 is urgent. How to go with these challenges, how to strengthen our Dynamic Capability by aligning what we had achieved and acquiring emerging new technologies? Since TPM philosophy has been ingrained in a lot of ways by deepening and widening, we'll see the way to prevail in the journey of TPM with Digital Transformation that would hopefully take us to another stage of agile and self-sustaining excellence.

**Mr. Zensuke Matsuda /  
TPM Award Assessor**
